J. M. THORBURN & Co.'S

Annual Descriptive Catalogue of

FLOWER SEEDS

WITH PRACTICAL DIRECTIONS FOR THEIR

CULTURE AND TREATMENT;

ALSO,

A CHOICE LIST OF

BEAUTIFUL FRENCH HYBRID GLADIOLUS,

AND OTHER

Spring Bulbous Roots.

✂ FLOWER SEEDS, from their light weight, can safely be transported by Mail to any part of the United States, with punctuality and expedition.

✂ ORDERS by Mail promptly attended to, and Catalogues forwarded, free of charge, to applicants.

JAS. M. THORBURN & CO.,

No. 15 JOHN STREET, NEW YORK.

PRACTICAL DIRECTIONS FOR THE CULTURE AND TREATMENT OF FLOWER SEEDS.

HARDY ANNUALS (hA).—These seeds should be sown in April and May. The Second sowing, to succeed the first, should be a month or six weeks after it. They may also be sown in pots the beginning of April, if they can have the protection of a cucumber frame or green-house. The soil for pots in which to sow them, should be light and rich; and when sown in the garden, the earth should be made fine—and if light compost, such as a mixture of garden soil and old manure in equal parts, it will advance the growth and strength of the plants if a spadeful is placed where each patch of seed is to be sown. The most effective way is, to sow the seed in patches where they are intended to bloom. All small seeds should *only be covered with soil an eighth of an inch thick*; but large seeds, such as Sweet Peas, should be placed at a depth of an inch or so.

Care must be taken to give support to such ANNUALS as require it, whether climbers or not, as soon as they are three or four inches high, otherwise they will trail on the ground and not grow strong. The earth around each patch of flowers must be kept loose and opened by the hoe, and free from weeds. In dry weather, some may require water; but none need be given at the time of sowing, unless the soil is very dry.

Where there is the convenience of garden frames with glass lights, *Hardy Annuals* and also *Biennials* may be sown in September, in small patches six inches apart in the soil—to be removed by taking each patch up in the following May (being careful to remove them with a good ball of earth, and immediately giving water,) when they can be placed in borders. In this case, the frames should not be covered, after sowing, with glass, until the Fall rains or frost render it necessary,—and in mild weather during Winter, air should be given by elevating the light in the middle of the day, whenever the temperature is above the freezing point.

HARDY BIENNIALS AND PERENNIALS (hB and hP).—These require the same treatment as the HARDY ANNUALS. In addition to the above, both HARDY BIENNIALS and PERENNIALS may be sown in the open border in September. In this case, it is a good plan at the commencement of frost to cover them slightly with straw or any dry litter, in order to afford some protection from the extreme severity of the Winters. As soon as weather breaks in Spring, the covering must be carefully removed and the surface around them loosened.

HALF HARDY ANNUALS (hhA).—These are best sown in pots or in a frame, in the open soil, as directed for *Hardy Annuals* when sown in September. They may be sown thus at any time after the middle of April, as the frame will be a sufficient protection,—but it is best to cover the glass with a mat or straw at night, until danger of night-frost is past. In the day give all the air possible by partially or wholly removing the lights. After the end of May, these may be sown in the open border, like *Hardy Annuals*.

Half Hardy Biennials and *Perennials* require the same treatment.

TENDER ANNUALS, BIENNIALS AND PERENNIALS.—The best method to obtain an early bloom of the *Tender Annuals* (tA), and to insure strength to the plants, is to sow the seeds in pots early in March, placing them in

a warm green-house or window, or plunging them in a moderate hot-bed, carefully protecting them from the cold, shading them from the midday sun, and watering them with a finely pierced watering can. The seed should be sown in very light sandy compost, and the pots well drained by placing broken earthenware and rough sods in the bottom. The finer seeds must not be planted more than an *eighth of an inch deep*, and the soil must be pressed down closely over them. Water frequently—particularly, if the house or frame is very warm. As soon as the seed leaf is fully developed, transplant into small pots, three or four in each, and when they have acquired sufficient strength transplant into the flower beds—not, however, before the middle of May.

GREEN-HOUSE SEEDS (g.)—Should be sown as directed for *Tender Annuals*, in pots, pits or boxes—be kept in the house, carefully watched, slightly watered occasionally, and sheltered from the hot sun till strong enough to transplant. Most of these varieties may be sown at any season of the year.

The smaller seeds of *Green-House Plants* are sometimes difficult to germinate, unless great care is taken in the mode of sowing. Thence the supposition is produced that the seed itself is not good, whereas the fault is not in the seed, but in the treatment. Fine seeds of this description should be sown in leaf-mould or peat earth, with some silver sand added to it, which should be pressed firmly down in the seed-pan or pot, and made perfectly level at the top, so that the mould may not afterwards sink materially with watering, and thereby carry down the seed with it to a greater depth than that at which it is sown. Sow the seed very thin, and cover *very slightly* with a little of the compost or with some of the silver sand. By this method the difficulty of succeeding with fine seeds will be removed. As soon as the young plants have two leaves, they should be transplanted into similar compost in another pot. To do this, do not pull them out of the seed-pan, but *lift* them out with the point of a knife under their roots. By that means, the young, minute roots are taken up without breaking. After transplanting, they should be kept in a shady part of the green-house for a few days until they are established in the new soil.

There are many minute plants, from the finer seeds, killed by drenching them with water whilst very young. One way to avoid this is to give the water by dipping a clothes-brush in water, shaking off the greatest part of the water from the brush, and then (holding the brush over the seed-pan) drawing the hand over the bristles several times, which will cause the water to be thrown on the young plants almost like dew. Whilst in the first stage of their existence, plants require moisture in a minute quantity, often repeated, and not in such large quantities as to saturate the soil in which they are growing.

PRIMULAS.—These charming plants may be brought to the highest perfection by the most simple means, if those means are seasoned with patience. It is a great point to give them a long period of growth before they flower, hence they should never be subjected to a forcing temperature, and, in fact, should be treated as nearly hardy, but have ample protection against frost, damp, and cutting winds. In order to enjoy the blooms of the Primulas for a long period, make at least two sowings of seed, the first in March, and the second in May. Further sowings may be made, if required, in June and July. Sow on a rich granular soil, and cover with a mere dusting of fine earth, and every seed will germinate; but if buried deeply, much will be lost.

CINERARIAS.—Need nearly the same treatment as Primulas. Frost, and

damp, and green fly are their principal enemies, but they are so nearly hardy that artificial heat must be afforded with great caution. Sow in April for plants to bloom in Winter, and in July for a bloom in the later Spring months. The July sowing will be the most valuable to those who have small gardens, as the flowering of the plants in the depth of Winter makes a tax on green-house space, when it cannot be well spared.

CALCEOLARIAS.—May be treated as Annuals, and by eliminating all the inferior plants as soon as they have flowered, a collection may be formed of original named varieties, from which valuable novelties may from time to time be selected. Sow the seed in July, in pans well drained. The seed should not be covered, but be put under a hand-glass, or in a close shady corner of a frame. The seedling plants may be pricked out into a bed of turfy-loam, in a frame for the Winter, making no demand upon the green-house for their keeping; or they may all be potted and Wintered in the house, in which case they will begin to flower in May.

GERANIUMS.—Of all kinds are the most valuable, if treated as Annuals, as in their seedling state, the plants are peculiarly robust and tree-like, and charmingly fresh in leafage and flowers, even if amongst them there does happen to be one that is specially valuable as a Florist's flower. When grown from good seed, however, a large proportion of fine varieties and a few real novelties may be expected. The seed may be sown on any day throughout the year, but the two best seasons are February and August. Sow in pans filled with a good mixture, in a somewhat rough state—if the surface nodules are as large as horse-beans it will be none too rough. Cover with a fair sixteenth of an inch of fine soil. Put the seed-pans in a heat of 60° to 70° if sown in February, but heat will not be necessary at all unless it is desired to bring the plants into flower early in the ensuing Summer. We have been accustomed to sow about the 10th of March, and place the seed-pans on a sunny shelf in a cool green-house, and have fine plants by the end of June, many of which begin to flower in August.

THE FOLLOWING CATALOGUES ARE PUBLISHED DURING THE YEAR,

ALL OF WHICH WILL BE MAILED ON APPLICATION.

Catalogue of **VEGETABLE, AGRICULTURAL, &c., SEEDS**, ready in January.

Catalogue of **FLOWER SEEDS**, containing Directions for their cultivation, with over 1000 Varieties, ready in February.

Catalogue of **TREE and SHRUB SEEDS**, with Directions for their cultivation, ready in February.

Catalogue of **FRENCH HYBRID GLADIOLUS**, and other Spring Bulbs, ready in February.

Catalogue of **DUTCH BULBOUS ROOTS**, with Directions for their Management, ready in September.

Catalogue and Almanac, with Directions for the Cultivation of Vegetables in the **SOUTHERN STATES**, ready in October.

 **TRADE LISTS** of the above, for Seed Merchants, published in January, May, August, and October.

NOVELTIES FOR 1874.

ALSO OTHER RARE AND IMPROVED FLOWER SEEDS.

<i>Ageratum cæruleum</i> , "Queen of the Massives." Sky-blue, violet tinted, dwarf, and very bushy.....	PACKET. \$0 25
<i>Amaranthus Abyssinicus</i> . Growing 5 feet high and the same in diameter, produces a remarkable striking effect, as single plants on a lawn..	50
<i>Amaranthus chloro-ruber</i> . Has purple spikes of flowers, habit and height the same as the preceding species, and adapted for solitary lawn plants.....	25
<i>Amaranthus olbiensis multicolor</i> . A showy plant of about 2½ feet in height, with long recurved purplish-green foliage, terminating gradually into blood-red, yellow, and green.....	50
<i>Amaranthus olbiensis sanguineus</i> . A brilliant plant, growing 3 feet high, with dark purple foliage, passing into a brilliant blood-red.....	50
<i>Andropogon Schimperii</i> . A perennial graminea, forming large tufts of dark green leaves, throwing up numerous flower stems to the height of 6 feet.....	50
<i>Aquilegia chrysantha</i> . A new bushy columbine growing 4 feet high, on the style of "A. Cærulea," but with yellow flowers.....	50
<i>Asparagus verticillatus</i> . A very interesting hardy perennial climber, scarce, but not new.....	25
<i>Aster</i> , "The Washington." The German introducer pronounces it the most perfect of all the Asters, two colors, white and peach blossom, each....	50
<i>Aster</i> "Goliath." An improvement upon the much admired Mont Rose, varieties, perfect flowers, mixed colors.....	50
<i>Aster</i> , "Meteor." A new dwarf dense bush, with extremely double globular bright crimson flowers.....	50
<i>Aster</i> , "Queen's Cockade." A perfect dwarf gem, quite distinct in habit, bright deep satiny-rose flowers, with a pure white centre.....	50
<i>Ballota perilloides</i> . A magnificent variegated leaved plant, resembling the green Perilla, the leaves are richly marbled with pure white.....	50
<i>Begonia Sedeni</i> "Magnifica." The flowers are double the size of the ordinary "B. Sedeni," and of a much more brilliant color.....	50
<i>Begonia Sedeni</i> "Victoria." Produces a profusion of bright carmine bloom, very valuable for bedding.....	50
<i>Bryonopsis laciniosa fructo elliptica</i> . A beautiful annual climber, 6 feet high, with curious bright green fruit sprinkled with white.....	50
<i>Celosia cristata pumila</i> , (President Thiers Cockscomb.) The perfection of Dwarfs, with uniform brilliant crimson heads.....	10
<i>Celosia cristata variegata</i> . Gold and crimson variegated Cockscomb, growing 3 feet high.....	25

NOVELTIES FOR 1874—*Continued.*

<i>Celosia pyramidalis splendida.</i> A Japan species growing 2½ ft. high with purplish green foliage and red stem, dark carmine flower heads.....	25
<i>Cheiranthus autumnalis monstrosa.</i> Very large densely set flower trusses, perfectly double crimson Intermediate stock.....	50
<i>Cheiranthus incanus magnificus.</i> A new robust fiery crimson, Brompton stock, with double-eyed globular flowers.....	50
<i>Cineraria hybrida flore pleno.</i> The double flowered Cineraria is by all odds the most valuable novelty introduced for years, the seed contains representatives of all the modifications of color usually found amongst Cinerarias.....	75
<i>Cobcea scandens fl. alba.</i> A new white variety of this well-known climber.....	50
<i>Delphinium Chinensis punctatum.</i> A new blue and red spotted variety of the Chinese Larkspur.....	50
<i>Dianthus caryophyllus Grenadin.</i> A new dwarf, very double, fiery red carnation.....	50
<i>Gaillardia Amblyodon.</i> A novelty from Texas, growing 2½ feet high, and producing flowers of a deep cinnabar red.....	25
<i>Godetia Schamini Nivertiana.</i> Very showy plant, with rosy-white flowers, stained with crimson purple.....	25
<i>Ipomœa Baclii cœrulea rubra.</i> A splendid novelty, with very large foliage and flowers, in the style of I. rubra cœrulea.....	50
<i>Mimulus Neuberti.</i> A new perfectly double flowered variety, with a great variety of colors; valuable for bedding.....	50
<i>Myosotis palustris semperflorens.</i> Charming Dwarf True "Forget-me-not," flowering throughout the season; valuable for bouquets and bedding.....	50
<i>Petunia variabilis striata plena.</i> Striped Double Flowered Petunia, carefully selected.....	75
<i>Phlox Drummondii, "General Grant."</i> One of the most beautiful delicate flesh colored varieties of this justly popular annual.....	25
<i>Polygonum hippopotami.</i> This semi-aquatic perennial grows about 6 feet high, and forms large bushes, with red stems and dark green foliage; should be planted in moist locations, or near a stream of water.....	25
<i>Portulaca oculata.</i> A most beautiful novelty in Portulacas; the flowers are white, with a reddish purple centre and red stalks.....	25
<i>Reseda odorata rubiginosa.</i> The brightest of the reddish-brown Mignonne, almost a scarlet.....	10
<i>Salvia splendens flore alba.</i> A new white flowered Salvia Splendens.....	75
<i>Verbena hybrida perfecta.</i> Pure white, scarlet, purplish, crimson, rose, each color separate, and flowers of standard perfection.....	75
<i>Wigandia imperialis.</i> The leaves of this ornamental plant are most beautiful, adapted for planting singly on lawns.....	25
<i>Zinnia elegans, Double.</i> New white striped, scarlet on orange ground, and sulphur striped, each color separate.....	25

ROBINSON'S
 CONCENTRATED GARDEN MANURE,
 IN TIN CANS - - - - EACH, 50 CENTS.

CHEMICAL WHALE OIL SOAP,
 For Preventing and Destroying Insects on Plants, Fruit Trees, &c.
 2 lb. Cans, 40 cts; 5 lb. Cans, 75 cts; 10 lb. Boxes, \$1.25; 20 lb. Boxes, \$2.25.

EXPLANATION OF THE CATALOGUE.

THE figures in the *first column* give the comparative time of *Flowering*. As it is impossible, in our varied extent of climate, to state the exact month any plant may flower in, we have adopted the simple plan of classing the different varieties into EARLY, INTERMEDIATE and LATE flowering sorts. Thus :

- No. 1 designates *early*.
- No. 2 " *intermediate*.
- No. 3 " *late flowering plants*.

The *second column* gives the *Botanical* name, in Roman characters; and for ready reference, also the common names, in *Italics*.

- * designates ornamental leaved Plants.
- -- in all cases, *repetition*.
- in vars -- *in varieties*, or mixed colors.
- fl. pl. -- *flore pleno*, or double flowering.

The *third column* gives the *Hardiness and Duration* :

- A representing *Annual*, lasting but one year.
- B -- *Biennial*, -- two years.
- P -- *Perennial* -- three or more years.
- E -- *Evergreen*.

But as a large number of the Biennials and Perennials, if sown early flower the first season, this distinguishing mark † is affixed to such :

- h. represents *hardy*—plants for open borders.
- hb. -- *half hardy*—plants that require to be forwarded in pots
- t. -- *tender*—requiring protection. [or frames.
- g. -- *green-house plants*.
- bu. -- *bulbous plants*.
- s. -- *shrubs*.

The *fourth column* gives the color in full except as abbreviated below. Thus :

- | | | | |
|------------------|--------------------|--------------------|--------------------|
| ap... apetalous, | bff... buff, | lav. ... lavender, | scar. ... scarlet, |
| blk... black, | car... carmine, | ptd. ... painted, | spot... spotted, |
| br... brown, | cr... crimson, | p. purple, | stri. ... striped, |
| sul... sulphur, | var... variegated, | ver... vermillion. | |

The *fifth column* gives the comparative height of the plants in feet—*trai.* signifies *trailing*.

The *sixth column*, the price ₧ packet.

☛ The NOVELTIES of the Season, together with some other approved varieties, will be found in **heavy-faced type**.

 **All Strictly Our Own Selections.** 

IMPROVED FRENCH AND GERMAN ASTERS.

In this latitude, Asters should be sown from the middle of March to the first part of May, on a spent hot-bed, or in pots, within a close pit or frame, or in the house—and when an inch high, they should be transplanted in fine soil, which should be spread over a discarded hot-bed, from whence they can be bedded out when about three or four inches high. This should be done during or immediately after showery weather. *Asters do finely sown in the open ground, middle of May. The only objection to this mode is, their late and short duration of flowering.*

 In ordering these Collections, please give the Numbers of the particular Assortments desired.

GERMAN TEN WEEKS STOCK.

Sow at the same time, and treat in precisely the same manner as Asters, except that they may be transplanted several times with advantage in the earlier stages of growth, the shift tending to give them a more compact and dwarf habit.

 In ordering, please give the numbers of the particular Assortments desired.
